(54) PORTABLE COMPUTER

(57) Abstract:

PURPOSE: A portable computer is provided to easily assemble a cable by simplifying a structure of a tilting member and a swiveling member, and to stably maintain an arbitrary rotational angle of an LCD assembly.

CONSTITUTION: The system comprises a hinge(40), a support(50), and an image signal transmission cable(30). The hinge(40) includes a hollow swiveling member(40b) and a pair of tilting members(40a). The hollow swiveling member(40b) is extended toward a main body(10). The tilting members(40a), facing each other in a radial direction of the swiveling member(40b), assemble the LCD assembly(20) with the main body(10) and can tilt the LCD assembly(20) with respect to the main body(10). The support(50), hollow and installed at the main body(10), supports the swiveling member(40b). The image signal transmission cable(30), having one end connected to the main body(10) and the other end passing through the swiveling member(40b) and the support(50), transmits the image signal from the main body(10) to the LCD assembly(20).
